(54) SEARCH METHOD BY SYSTEM ID PLURAL REGISTRATION FOR WIRELESS TELEPHONE DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To make it possible to receive services favorable to a user so that systems other than the one registered in advance with a wireless telephone terminal can be used out of plural radio communications differing in carrier frequency.

SOLUTION: A search system, in which plural wireless communication systems differing in carrier frequency exist overlapped in the same region and a wireless telephone terminal selects one of the plural wireless communication systems, has a registration means (step A1) for registering a first plural system IDs that reject a connection among the plural wireless communications with the wireless terminal in advance, comparison means (steps A2 to A4) for comparing a second system ID of the wireless communication system that can be received by the wireless telephone terminal with the first plural system IDs already registered and a connection means (step A5) for connecting the second system ID as a system ID of the wireless communication system to be connected when the system IDs do not coincide with one another.

※ A1の登録：登録したIDで使えないIDを登録

※ A4の判定：登録していないIDで使えないIDを判定
